Capstone Project

Idea: Multiplayer online game analogy to codenames, but there will be cards with pictures along with cards with words.

MVP:

- A register/login page
- Settings page for admin when setting up a game
- lobby page to see who is ready to play
- actual game page with an action history on one side and a chat for players on another

Future Features:

- Implement a feature where the admin will be able to make custom game sets as a combo of cards with words and cards with pictures.
- records page: best Codemasters and etc.
- ratings for players
